

KX Flow Connectivity

KX Flow includes a library of handlers for common feeds, as well as a service for developing new in-house or external feed connections. They provide fast, robust and supported access to multiple data sources enabling clients to focus on the core business goals.

Key functionality

- Data Normalisation
- Configurable schemas
- Audit Trail and logging
- Built in BBO calculations
- Statistics & time stamping
- Record and replay capability
- Order book generation
- Cross/lock book checking
- Depth snapshots and management
- Message Batching
- Symbology mapping

Benefits

- Easy to deploy, tried and trusted implementations across multiple clients site.
- All handler functionality has been developed on a common framework to sharing core capabilities
- The accompanying KX for Control administration console enables centralised management and configuration of adaptors
- KX provides on-going support including upgrades, schema or protocol changes
